Firefox (Test with Firefox 47.0)

At this message, click on Advanced

In the Advanced window, click Add Exception.

At the Add Security Exception pop up, click on Confirm Security Exception.
If you also check, Permanently Store this Exception, you should not have to go through this routine the next time you access that resource.

When you get the Secure Connection Failed message, **DON’T** click Try Again. At this point, go back and click on the original link and it should open. Even with the exception permanently stored, you will probably still get this message and have to go back to the resource and click again.
CHROME (Tested with version 51.0.2704.106 m)

Click on Advanced:

Then click on ‘Proceed to <url> (unsafe)’
You should get the following message:

![Error Message](image)

Note: When you next attempt to access the book, you may have to go through all the steps again, or you may just get the last message.

**Safari**

![Certificate Error Message](image)

Click ‘Continue’ to proceed to the Database
Internet Explorer (tested with IE 11)

At this error message, click on “Continue to this website (not recommended)

You should end up at a blank white screen. Go back and click on the secure link again.

If you get this message, or something similar, go back and click on the secure link again.

In tests, it has sometimes taken two tries after the initial certificate message and sometimes 3 before the book opens correctly.

Note: when tested with Microsoft Edge, the first click on the resource resulted in a blank white screen. Clicking on the resource again resulted in the error message.
